

# CLEAR THE AIR

## THE IMPORTANCE OF AIR DUCT CLEANING

### DID YOU KNOW?

Contaminants like dust, pet dander and mold could be circulating in your air heating and cooling systems.

Regular air duct cleaning can remove contaminants and result in a longer life and better performance from your HVAC unit.

### TIME FOR DUCT CLEANING IF:

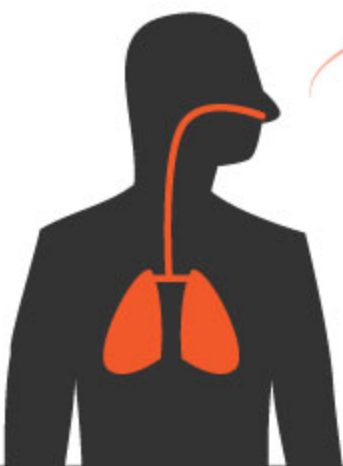

1. You notice a musty odor when the furnace is on
2. You have allergies
3. Dust accumulates quickly
4. You have pets

In a typical six-room home, up to 40 pounds of dust is created annually through everyday living.

Ducts can act as a collection source for a variety of vermin, such as rodents (and droppings), spiders, bugs, and small particles of dust. The removal of such contaminants should be considered one component in an overall plan to improve indoor air quality.

### DIRTY DUCTS CAN AGGRAVATE ALLERGIES

Dirty ducts may contribute to health issues that could cause serious problems for people with respiratory health conditions, autoimmune disorders or some environmental allergies.

## CLEAN DUCTS SAVE ENERGY

# 25-40%

of the energy used for heating or cooling a home is wasted, according to the U.S. Department of Energy.

Contaminants in the heating and cooling system cause it to work harder and shorten the life of your system. Although filters are used, the heating and cooling system still gets dirty through normal use.
